N.I.	ZF Fluids (See below and the service section for application and information)				

ZF FLUIDS

Transmission fluids are not alike, and more importantly, are not interchangeable with each other. Each transmission needs a specific type of transmission fluid to operate properly. The use of incorrect transmission may cause extensive damage to internal parts of the transmission and may bring the transmission right back to your shop.

The use of correct transmission fluid will increase the life of the transmission and can reduce some friction between you and your customers.

That is why ZF industries, Inc. offers the recommended lubricants for the ZF passenger car transmissions in addition to the complete line of kits and spare parts. ZF has the recommended transmission oils available in 20 liter (18.93 quarts) canisters as well as 55 gallon drums. Also available is the transfer case and differential oil for AWD applications and the recommended Torsen differential additive.

96-400
Shell Transmission Fluid
(20 litre container)
5HP30 w/black tag

NOTE: Do NOT mix SHELL/ESSO during any service.

96-401
Esso Transmission Fluid
(20 litre container)

5HP30 w/green tag (All other 5 speeds exc. 5HP18 black tag use dexron).
(NOTE: 5HP18/5HP30 (black tag) can use ESSO for complete rebuild).
